Whale Watch All Year

BREMER BAY ORCA EXPERIENCE

When Jan - March **Departing** Bremer Bay, WA

The Bremer Canyon is the summer feeding grounds for these apex Dinosaurs of the Deep.

This is your opportunity to be a part of a new frontier of research and development with Whale Watch Western Australia. Discovered by marine researchers just a decade ago the Bremer Canyon plays host to the largest congregation of Orca's in the Southern Hemisphere.

It is believed that an Antarctic flow enters the canyon gathering bio carbons which create a nutrient rich environment which entices many marine species to the area each year. This interaction creates nutrient rich up welling waters where phytoplankton develops and an intense food chain for marine life prospers.

Orca's are at the top of that food chain.

— AN OPPORTUNITY OF A LIFETIME TO DISCOVER THE APEX DINOSAURS OF THE DEEP™

Duration: 7 Hours (approx)
Your trip will include: Morning Tea, Lunch, Afternoon Tea, Light Beer, Wine, Soft Drink, Filtered Water, Tea & Coffee.

PERTH CANYON BLUE WHALE EXPERIENCE

When March - May **Departing** Fremantle, WA

ONLY TOUR IN AUSTRALIA

A NEW MARINE FRONTIER in Western Australia. This new frontier eco hot spot off the Perth, Western Australian coastline are the feeding grounds for the largest aggregation of Blue Whales in the Southern Hemisphere. A little known pristine environment with gargantuan dimensions larger than the Grand Canyon, with origins dating back to the entrance of the Swan River in Perth.

Research teams have monitored Blue Whales along with many other cetaceans and mega fauna that come here to feed on krill created by the Leeuwin Undercurrent and the Perth Canyon topography. This interaction creates nutrient rich up welling waters where phytoplankton develops and an intense food chain for marine life prospers.

This biodiversity includes Dolphins, Australian Sea lions, Sharks, Migratory Antarctic Sea Birds, Sunfish, and much more that feed on this biomass bonanza.

"IT'S THE MAJOR FEATURE ON THE WEST AUSTRALIAN COASTLINE AND STANDS UNRIVALLED IN TERMS OF MARINE LIFE AND PRODUCTIVITY." Professor Pattiaratchi - University of WA

Duration: 7 Hours (approx)
Your trip will include: Morning Tea, Lunch, Afternoon Tea, Light Beer, Wine, Soft Drink, Filtered Water, Tea & Coffee.

EPIC HUMPBACK MIGRATION

NORTHERN MIGRATION

When May - Aug **Departing** Augusta, WA

SOUTHERN MIGRATION

When Sep - Dec **Departing** Fremantle, WA

The world's largest Humpback migration takes in a 13,000 km six month round trip from Antarctica to Camden Sound in the remote Kimberley region to give birth to the next generation of Humpbacks each year.

This incredible journey is made without food or nourishment for the adult Humpback. Females calve and nurture their new born on the return trip to Antarctica, an astonishing accomplishment.

Witness the intense competition pods as they move northward and discover the intimate new born calves on the southern return migration.

Duration: 2 Hours (approx)

SOUTHERN RIGHT WHALE MIGRATION

When July - Aug **Departing** Augusta, WA

Southern Australia's coastal pavement plays host each year to the unique Southern Right Whale as they calve in the shallow clear waters of the coastal fringe. Weighing in at 80 tons and a length of up to 18 metres they have a fondness for interaction with humans and tragically this is how they coined their name as they were the right whale to hunt. Whale Watch Western Australia is committed to the latest research developments and provide data to both the Murdoch & WA Universities that study and protect these magnificent whales.

Duration: 2 Hours (approx)
